RESEARCH INTERESTS

I am interested in adolescents' and young adults' educational achievement and career/vocational development, with a specific focus on the role of gender and family dynamics in youth development and achievement among families from different sociocultural backgrounds. I am also interested in methodological approaches to analyzing individual development and family systems, such as growth curve analysis and dyadic/multi-member data analysis. Finally, my interests extend to computational social science, with a focus on utilizing large-scale and big data and machine learning methods to inform developmental and family research.
